

## Westbury National Green Policy

Taking responsibility for environmentally conscious practices is beneficial to everyone – our customers, employees and the communities in which we operate. Westbury National is committed to improving our environment by minimizing this organization's environmental impact.

With focus on the three principles of **Reduce, Reuse and Recycle**, Westbury National has set forth the following guidelines to assist our conscious efforts in operating with as little environmental impact as possible...

- **Compliance with environmental regulations** - We seek not only to comply with safety and environmental regulations, but also to implement in-house standards that aim to improve our current environmental impact/footprint and prevent pollution.
- **Efficient use of resources** - We seek to minimize our environmental impact by attempting to use resources efficiently, save energy, reduce waste, and encourage recycling in all areas of our business.
- **Choosing green partners** - Wherever possible we attempt to work with similar minded environmental oriented organizations and to adopt environmentally friendly technologies for services.
- **Use of recyclable materials** - We strive to minimize our environmental impact by using recycled and recyclable materials.
- **Promote Environmental Awareness** - We endeavour to raise our employees' environmental awareness by actively addressing any environmental concerns and by promoting less impactful products and services amongst our customers and suppliers.

We will remain dedicated to seeking new ways to minimize our environmental impact and will continue doing so through the guidance of a Green Committee comprised of employee volunteers who have expressed their interest in promoting environmental solutions for our company and industry.

Frank Gerstein, Managing Director  
Westbury National

Date: DECEMBER 02, 2012
